Node

| Number |
| Length |
| Cars |
| Time | next |

List of nodes

Struct node
→ Number of the node
→ Length of the road (KM)
→ Cars on the road (Number)
→ Time → minutes
→ Struct node* next

1. Time conversion
2. Adding data
3. Finding 1 data
4. Adding data for particular day
5. Edit data
6. Adding for the 1st time
since for 2nd, 3rd ... so on we know which nodes are connected so length of road is not required
7. Delete
7. Formula to get Time

※ Dijikishta Algo to find shortest dis
※ To find shortest time
Safest route
